

OMV

For a future
that starts with
responsibility.

A competent partner

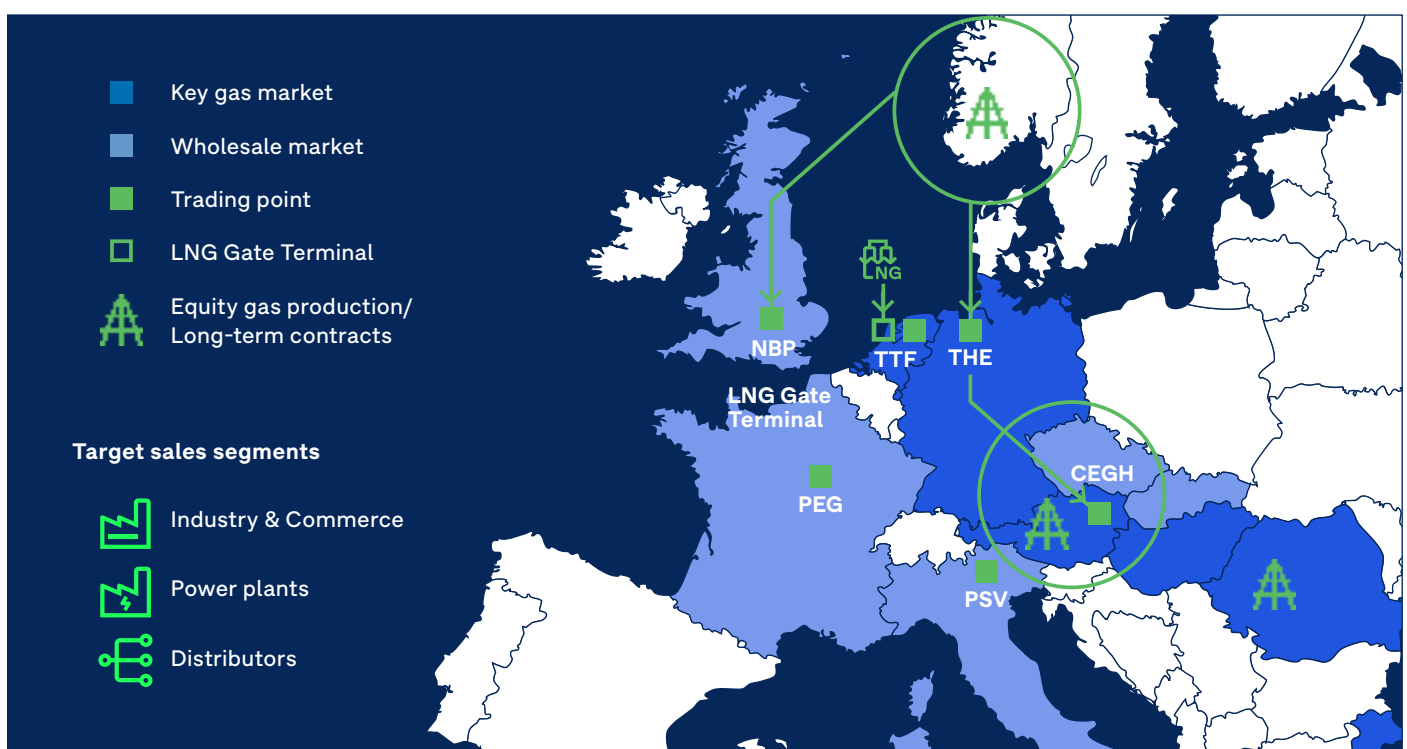

Thinking about the future, for us, means thinking about our partners. We want to know what their future goals are and how we can help achieve them. With more than 60 years of experience in the oil and gas industry, we combine competence, customer focus, and international expertise, always finding the best solution. As part of the OMV Group, we offer you financial stability and a clear strategy to secure your energy supply.

Our strategy: natural gas as a key energy source

At OMV Gas, we focus on gas as a key energy source. We expect the demand for natural gas to remain stable until 2030 and are therefore well prepared:

- **Secure supply:** Diversified natural gas supplies, gas storage facilities, reliable transport routes, and long-term contracts provide energy security.
- **Additional sources of supply:** New supplies from Norway and LNG strengthen our diversification.
- **Harnessing the potential of LNG:** Our LNG capacity ensures flexible and stable gas supplies through long-term contracts.
- **Driving change:** Our long-term goal is a low-carbon energy future.

Operating in Europe's major gas trading hubs, we are the reliable partner you can count on – in Austria, Germany, the Netherlands, and beyond.

Customized solutions

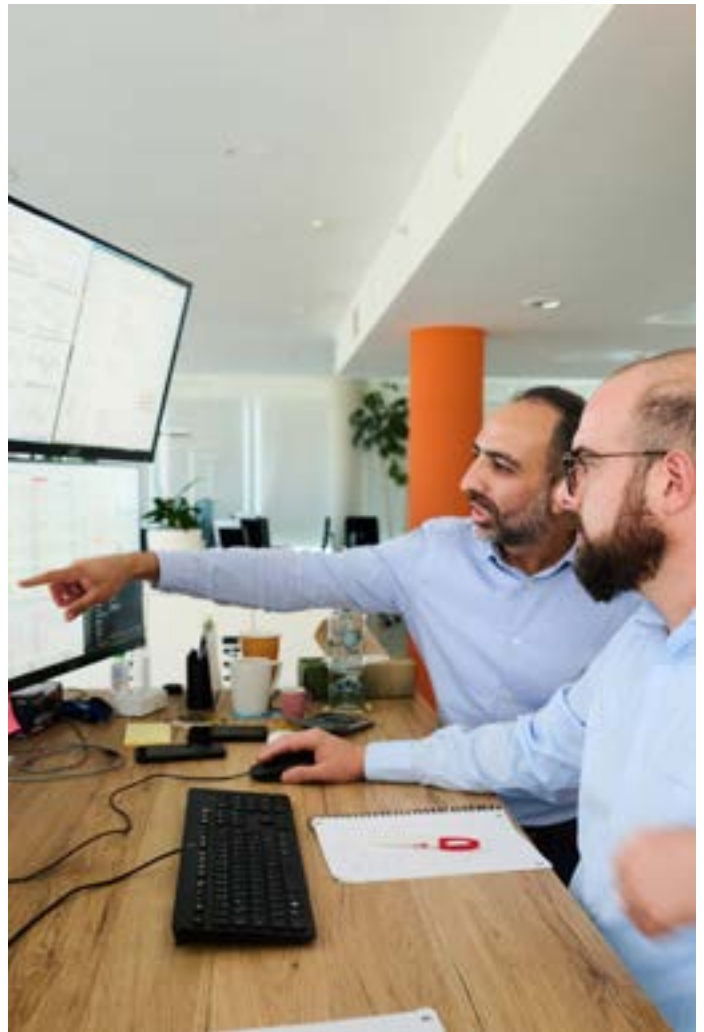

With many years of experience in sales, trading, logistics and supply we are able to offer customized solutions infused by international expertise. We help everyone to stay one step ahead – whether you are in industry or commerce, a distributor, an energy producer or an agricultural producer.

The smart alternative: A head start with gas

You benefit from:

- Customized pricing models
- Engineering services
- Multi-site contracts

We focus on efficiency and reliability, giving you the planning reliability you need to achieve your business goals.

Responsibility with vision

We are a strong company with a global reach and a focus on the circular economy, providing energy solutions for tomorrow's world.

Secure supply

Our mission is clear: to ensure a stable and sustainable supply of gas.

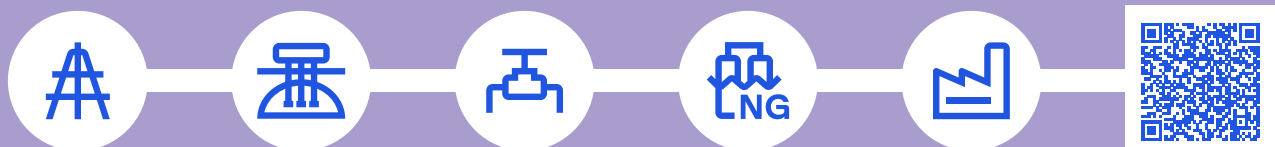

We provide security of supply through

- Equity gas production
- International contracts with gas producers
- Capacity at the LNG terminal in Rotterdam

From well to application

As a fully integrated European gas provider we cover the entire supply chain, aiming for maximum transparency. Discover the journey our gas takes. Just scan the QR code.

Gas is more

Natural gas bridges the gap left by coal and nuclear power when renewable energy sources like solar, hydropower, and wind are insufficient. It produces lower emissions than other fossil fuels and is set to overtake coal and oil in the European energy mix.

The smart alternative: A head start with gas

- **Carbon neutral and compatible with existing pipelines**
 - **Can be used flexibly to meet peak demand**
 - **Supports the transition to renewables**
- But gas is essential to our energy future. Green gases such as biogas, methane, hydrogen, and synthetic methane will play a key role in sustainable energy supplies for generations to come.

OMV – a strong partner with a global reach

The numbers speak for us:

- **39 billion euros** in group revenues in 2024
- A year-end market capitalization of **around 12 billion euros**
- **Around 24,000 employees** at our integrated European sites, working every day to develop sustainable energy solutions

This makes OMV one of the largest listed industrial companies in Austria.
